O-225889 - Infatica - Audit (E026983)

Dear Mr. Khaleta,

NCC Group can confirm that a security assessment of the development SDK was conducted between 06/10/2025 and 14/10/2025..

The security of the target was investigated from an external perspective in a dynamic security assessment which was conducted with no prior knowledge of the systems within scope. No critical or high risk vulnerabilities were found as a result of this security assessment. It was confirmed that the Infatica SDK was not found to collect or store any sensitive or PII Data.

Following this assessment, the identified security weaknesses were analysed and the impact and probability of exploitation associated with each security weakness were evaluated. More detailed technical information about this security assessment is provided in the full report released to INFATICA in October 2025. The full report also contains suggested corrective actions and recommendations for mitigating the identified risk.

Yours sincerely,

Joe Hart  
Associate Director
